

Chapter 1

Installation

1.1 R

R is the underlying software that does all the calculations. R can be downloaded and installed from the R project website: <https://www.r-project.org/>. Or from the Swedish mirror here (which actually is in Umeå): Download R. Generally no adjustments are needed in the Windows installation program; always clicking on "next" during the installation process should work fine.

1.2 RStudio

While R is doing all the work, it is not very convenient to work with. This we work with RStudio during these course. It is a program to that makes it much easier to work with R. Go to rstudio.com. Find the download link, download and install the free RStudio Desktop version.
